U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

Continuation of 11, does NOT place the application in condition for allowance because: Applicant's arguments are not found persuasive. Applicant regues that the citations of HPMS in the cited references do not make obvious HPMS with a viscosition of HPMS with viscosities well argument is not found persuasive because it was known at the time the claimed invention was made to utilize HPMS with viscosities well over 50,000 in order to modify the release kinetics of similar formulations as evidenced by US Patent 6,046,170 Stella et al. (50. 18, top half). Applicant also argues that Schoenhard does not disclose the specific combination of pH dependant materials claimed. This argument is not found persuasive because Schoenhard teaches a limited number of pH dependant materials cultization in enteric coatings and that said materials may be combined, Schoenhard also makes specific reference to the pH at which several of said components begin to dissolve, which shows that the Schoenhard had considered the different DH's at which domonents dissolve.
